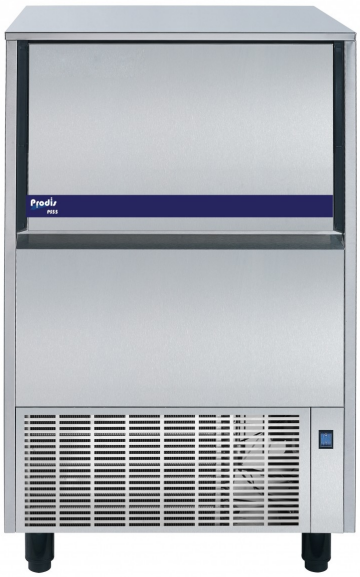
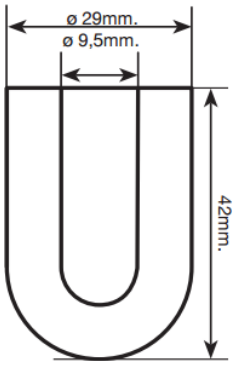
Prodis PS Series Ice Makers

Designed to operate in even the most demanding environments, the PS Series are unique icemakers which operate without a thermostat which means they can be comfortably installed in ambient temperatures as low as 5°c but thanks to the tropicalised condensing unit they can also cope in high ambient temperatures of up to 40°c making them one of the most versatile ice makers available on the market today. The PS series utilises a paddle production system which doesn't need water pumps or spray jets making it a lot less susceptible to limescale build up than other production methods.





Standard Features

Paddle system production Ideal for hard water areas

Operates without thermostats

Suitable for use in ambient temperatures as low as +5°c and as high as +40°c

AISI 304 stainless steel construction

Space saving inward opening door

Tropicalised condensing unit

R404a refrigerant

Mains on/off switch
